1. The first part of the report is a general description of the project. It includes the title, the objectives, the scope, and the organization of the project. The title is "The Effect of Temperature on the Rate of Reaction of Hydrogen Peroxide with Potassium Iodate". The objectives are to determine the effect of temperature on the rate of reaction and to determine the activation energy of the reaction. The scope is limited to the reaction of hydrogen peroxide with potassium iodate in aqueous solution. The organization of the project is as follows: a general description of the project, a description of the experimental procedure, a description of the results, and a discussion of the results.

2. The second part of the report is a description of the experimental procedure. It includes the materials, the apparatus, and the procedure. The materials are hydrogen peroxide, potassium iodate, and sulfuric acid. The apparatus is a reaction flask, a thermometer, and a stopwatch. The procedure is as follows: a known volume of hydrogen peroxide is added to a known volume of potassium iodate in a reaction flask. The temperature of the reaction mixture is measured. The time taken for the reaction to occur is measured. The rate of reaction is determined from the time taken for the reaction to occur.

3. The third part of the report is a description of the results. It includes the data, the graphs, and the calculations. The data is as follows:

| Temperature (°C) | Time (s) |
|------------------|----------|
| 20               | 120      |
| 30               | 80       |
| 40               | 60       |
| 50               | 45       |
| 60               | 35       |

The graphs are as follows:

The calculations are as follows:

The rate of reaction is determined from the time taken for the reaction to occur. The rate of reaction is calculated as follows:

$$\text{Rate of Reaction} = \frac{1}{\text{Time (s)}}$$

The activation energy of the reaction is determined from the slope of the graph. The activation energy is calculated as follows:

$$\text{Activation Energy} = \frac{R \times \text{slope}}{\text{Slope}}$$

where R is the gas constant, 8.314 J/mol·K.
